

Dashboards

umajin

- Digital Dashboards allow visualization of your key information in real time
- Umajin can read from the Amazon IOT layer and the Azure IOT layer or from common Enterprise systems. You can also implement custom connectors in Javascript
- Dashboards can include actionable control interfaces to allow immediate response to incoming alerts
- Dashboards can be delivered onto any device, desktop or mobile
- Umajin includes a visually appealing library of components and charts
- Umajin ServerKit includes Real Time API's to bring Dashboards to life – along with a data aggregation and processing layer to augment data
- Data can include information captured from users such as statuses or even sentiment analysis on textual comments
- Umajin supports advanced embedded camera systems which can capture the physical state of the real world through machine vision. Tasks include reading gauges and meters, counting objects and detecting the presence or absence of templates. This data can also be streamed and integrated into Dashboards

Real Time Dashboard for PwC Connected Solutions at Mobile World Congress 2019
